FIRMWARE VERIFICATION & VALIDATION HANDOVER REPORT

1. Document Information

Field	Description
Project	
Firmware / Module	
Firmware Version	
Package Version	
Document ID	
Release Date	
Firmware Owner	
V&V Contact	
Document Status	Draft / Released / Approved

2. Firmware Release Information

2.1 Software Identification

Parameter	Value
Firmware Name	
Firmware Version	
Git Repository	
Git Branch	
Git Commit Hash	
Release Tag	
Build Date	
Build Configuration	Debug / Release
Compiler	
Compiler Version	
IDE	
IDE Version	

2.2 Deliverables

Deliverable	Version / Reference	Location
Firmware Binary (.hex / .bin)		
ELF File		
CMSIS-Pack (.pack)		
Source Code		
Release Notes		

Deliverable	Version / Reference	Location
Integration Guidelines		
Test Report		
Configuration Files		

3. Hardware & Software Environment

3.1 Hardware Platform

Parameter	Description
Evaluation Board	
Microcontroller	
MCU Revision	
Clock Configuration	
External Components	
Debugger / Programmer	

3.2 Software Environment

Parameter	Description
Operating System	
IDE	
Compiler	
Required SDK / HAL	
CMSIS Version	
RTOS Version	
Third-party Dependencies	

4. Firmware Features & Functionalities

List all functionalities implemented in this firmware release.

Feature ID	Feature Name	Description	Implementation Status
FEAT-001			Implemented
FEAT-002			Implemented
FEAT-003			Partially Implemented

5. Configuration & Integration Information

5.1 Firmware Configuration

Configuration	Description	Selected Value
Memory Allocation	Static / Dynamic	
Debug Mode	Enabled / Disabled	
RTOS	Enabled / Disabled	
Feature Configuration		

5.2 Memory Configuration

Memory Region	Start Address	Size
ROM		
RAM		
Stack		
Heap		

5.3 Integration Requirements

- Required source files:
- Required header files:
- Required compiler definitions:
- Required linker configuration:
- Initialization sequence:
- Hardware dependencies:

6. Firmware Verification Status

Provide the verification activities already performed by the Firmware team.

Test ID	Test Description	Test Level	Result	Evidence
FW-TEST-001	Build verification	Build	PASS / FAIL	
FW-TEST-002	Module initialization	Unit	PASS / FAIL	
FW-TEST-003	Functional verification	Unit	PASS / FAIL	
FW-TEST-004	Module integration	Integration	PASS / FAIL	
FW-TEST-005	Memory verification	Analysis	PASS / FAIL	

7. Known Issues & Limitations

List known issues that may impact V&V activities.

ID	Description	Impact	Workaround	Status
ISSUE-001				Open
ISSUE-002				Open

8. V&V Test Recommendations

Provide information to help the V&V team prepare its test campaign.

8.1 Recommended Test Areas

- Functional testing:
- Interface testing:
- Error handling:
- Boundary conditions:
- Memory management:
- Timing and performance:
- Stress testing:
- Regression testing:

8.2 Specific Test Considerations

- Special configuration requirements:
- Initial system state:
- Required test equipment:
- Expected behavior:
- Known constraints:

9. Requirements Traceability

Requirement ID	Requirement Description	Firmware Implementation	Verification Status
REQ-001			Not Tested
REQ-002			Not Tested

10. V&V Handover Checklist

- ☐ Firmware release identified and frozen.
- ☐ Firmware binary delivered.
- ☐ Source code reference provided.
- ☐ Build environment documented.
- ☐ Hardware requirements documented.
- ☐ Configuration files delivered.
- ☐ Release notes delivered.
- ☐ Integration guidelines delivered.
- ☐ Known issues communicated.
- ☐ Firmware verification results provided.
- ☐ Requirements traceability provided.
- ☐ V&V team informed of specific constraints.

11. Handover Acceptance

Role	Name	Date	Status / Signature
Firmware Developer			
Firmware Lead			
V&V Engineer			
V&V Lead			

12. Revision History

Version	Date	Author	Description
1.0.0	YYYY-MM-DD		Initial release
